Snapchat galt lange Zeit als neues Kommunikationsmedium der jungen Generation. We introduce an automated assessment of the SCPT based on inertial measurement units IMU in a study of 83 participants aged years. Based on these two components, visual stimuli are repositioned depending of the animal's head position in a closed-loop approach.

A study has been performed consisting of observations in the field and interviews. Motivation gains in the wild. Both approaches are evaluated in a low and higher resolution setting on data of two persons inhabiting a laboratory equipped with motion sensors and contact sensors.

Personal Quarterly 69, 2, Effects of in-group norms and outcome control on failure in the context of the growing imbalance between potentially young caregivers and most often older people receiving care, technical monitoring systems may help to organise care more efficiently and to identify degrading abilities very early to trigger preventive measures.
