But given the things we know about physics, objects with mass and gravitational pull attract, and black holes aren't magnetic enough to repel each . Detectingblackholeswouldbeimportantbecausethesignalsthatwewouldge fact even in the 30s the greatest minds of that time, [including] Einstein himself, despised the idea of a black hole because it contained a singularity, namely a place where curvature is so large that even general relativity breaks. A computer simulation shows a supermassive black hole in the heart of a galaxy.
